INTRODUCTION

The data presented in this report were collected to satisfy, in part, the objectives of Mineral Management Service (MMS) contract number 14-35-0001-30619, "Distribution and Abundance of Marine Mammals in the North-Central and Western Gulf of Mexico." This program includes aerial, acoustic, visual, and hydrographic surveys, a sperm whale tagging and tracking program, and a remote sensing survey. The program involves the combined efforts of Texas A&M University at Galveston (TAMUG), Texas Institute of Oceanography (TIO), Texas A&M University at College Station (TAMU), the National Marine Fisheries Service (NMFS) at the Southeast Fisheries Science Center, and Oregon State University's Hatfield Marine Science Center. This MMS program, named GulfCet, is designed to ascertain the distribution, abundance, seasonality, and movement patterns of cetaceans along the continental slope from the Florida-Alabama border to the Texas-Mexico border between the 100 and 2000 meter isobaths.

The GulfCet program participates in four TAMU sponsored cruises per year, one cruise per season, for two of the three years of the contract period. These data were collected on the fourth TAMU GulfCet cruise, a fourteen day winter cruise, February 11-25, 1993, aboard the Louisiana Universities Marine Consortium (LUMCON) ship, R/V *Pelican*. This cruise had a threefold purpose: a visual survey of marine mammals, a continuously recording acoustic survey, and a hydrographic survey. A transect consisting of fourteen North-South track lines (Figure 1) was followed during the cruise. Track line 1 was not sampled due to ship time constraints. The stations were sampled in reverse order, beginning with line 14, station 143.

Data from the hydrographic survey are presented in this report. Requests for data should be sent to the Minerals Management Service at the Gulf of Mexico Regional OCS Office in New Orleans, or via Dr. Giulietta Fargion, GulfCet DMO, TAMUG, Galveston, Texas, (OMNET/ G. Fargion). The data in this report are available in digital form.

STANDARD PROCEDURES

Data in this report were obtained with CTD lowerings, rosette casts, XBT deployments, and LUMCON's continuously recording proprietary system, Multiple Interface Data Acquisition System (MIDAS) (Walser, et al., 1992). Sea-Bird Electronics SBE 9 Plus CTD was used on this cruise, and lowered to the sea floor, or to a maximum depth of 1000 m. Sparton of Canada XBT probes, hardware, and software, along with Sippican's XBT launcher were also used. A rosette holding 12 5-liter Niskin bottles was lowered with the CTD.

Expendable Bathymeterograph (XBT) Data:

XBT's (Appendix A, Table 1) were launched at the depths of 200, 350, 500, 800, 1000, and 1500 meters along each track line, using T-7, T-10, and T-20 XBT probes.

Conductivity/Temperature/Depth (CTD) Data:

CTD stations (see Appendix A, Table 2, which shows desired station positions) were located at the 100 and 2000 m isobaths (except at the Mexican border), and at 40 nautical mile intervals on each track line. Vertical profiles of salinity, temperature, oxygen, and beam attenuation coefficient (transmissometry) were measured at every station. At stations less than 500 m, in situ fluorescence was also measured.

The CTD temperature, pressure, dissolved oxygen, and conductivity sensors are calibrated semi-annually at Sea-Bird Electronics.

Continuous Recording Data:

A continuous recording of navigation data, surface hydrographic data (salinity, temperature, fluorescence, light transmission, and sea water flow rate), meteorological data (wind speed, wind

direction, air temperature, barometric pressure, and solar irradiance) were collected with the MIDAS system. The MIDAS system sampling rate is an average of every fifteen seconds. This system uses a Sea-Bird Electronics' temperature sensor, and a Sea Tech, Inc. fluorometer and transmissometer. The conductivity-temperature meter on the MIDAS is calibrated annually at Sea-Bird Electronics.

Rosette Cast Data:

The rosette was lowered with the CTD at all designated stations. The bottles were closed on the upcast, and twelve water samples were collected at each station. Chlorophyll samples were taken from each bottle at all CTD stations. A salinity sample was taken from each bottle at the following stations: 03-030, 06-064, 08-076, 10-097, 12-125, 13-133, and 14-143.

Salinity samples were analyzed at TAMU, using a Guildline Connectively Coupled Salinometer (model number 8400A). The Salinometer was standardized with Wormley Standard Seawater. Salinity values are reported to four decimal places.

Chlorophyll samples were filtered on board and kept under liquid nitrogen until return to shore. The chlorophyll data are not presented in this report, but will be reported in a later technical report.

TABULATED DATA

The "start time" for hydrographic casts is Central Standard Time. Bottom depth was determined acoustically (DATA SONIC SBT 220), but in some cases the depth was estimated from bathymetric charts.

Expendable Bathythermograph (XBT) Data:

Raw frequency data were processed with an in-house conversion program using Sparton's drop rates (Sparton of Canada, 1992). The processed XBT data were interpolated using a program developed at Scripps Institute of Oceanography. Interpolations are at 1 m. steps, and data are listed at 10 m. intervals. Probe failures occurred at stations 06-061, 12-123, and 13-131. Seven extra XBT probes were deployed at marine mammal sightings or for acoustic array calibration. The extra probes are listed by their corresponding track line number followed by EX. The probe deployed for acoustic calibration is listed as NL, indicating that it was not on a track line.

The 15° and 20° C isotherm depth maps (Figures 2 and 3, Appendix B) were compiled from processed XBT data, and were plotted with *Surfer* software (version 4, Golden Software, Inc.). Figure 4 in Appendix B shows a plot of the surface temperature values taken from the MIDAS versus those taken from the XBT's.

Conductivity/Temperature/Depth (CTD) Data:

CTD data are tabulated to "standard levels" (UNESCO, 1991). The CTD data were acquired at 24 Hz and processed using Sea-Bird's Seasoft software (version 4.015, Sea-Bird Electronics, 1992).

The following CTD data processing steps were used:

1. DATCNV Converts raw data to binary engineering units and stores data in CNV files.
2. SPLIT Splits the CNV files into upcast and downcast files.
3. WILDEDIT Checks for and marks 'wild' data points.
4. FILTER Filters data columns to produce zero phase time shifts.
5. ALIGNCTD Aligns specific temperature, conductivity, and oxygen measurements with their corresponding pressure measurement.
6. In-house program Converts temperature to ITS-90 scale (UNESCO, 1991).
7. CELLTM Removes conductivity cell thermal mass effects from conductivity data.
8. LOOPEDIT Marks the scan where CTD is moving less than the minimum velocity or traveling backwards due to ship roll.
9. DERIVE Computes dissolved oxygen and depth.

10. BINAVG Averages the data into 1 m. depth bins.
 11. DERIVE Computes salinity (PSS-78), density (EOS80), potential temperature (Pot. Temp), specific volume anomaly (SVA), and sound velocity (Chen-Millero) using Fofonoff and Millard's (1983) formulas.

No data corrections were made. The temperature sensor was calibrated after this cruise at Sea-Bird Electronics. On April 21, 1993, a drift of 0.00328 was obtained.

Station positions for the processed CTD data indicate actual occupied positions. Three CTD stations were not sampled due to CTD pylon, sea cable, and sensor failure. Figure 5 (Appendix B) shows a plot of CTD sea surface temperature values versus MIDAS sea surface temperatures. Figure 6 (Appendix B) shows a CTD versus XBT temperature comparison for stations 05-050 and 05-051, with a 2.91 mile separation.

Column headings and units for the tabulated CTD data are as follows:

<u>Depth</u>	Depth	m
<u>Temp</u>	Temperature	°C
<u>Pot. Temp</u>	Potential Temperature	°C
<u>Salinity</u>	Salinity	PSU
<u>Density</u>	Density	kg/m ³
<u>SVA</u>	Specific Volume Anomaly	10 ⁻⁸ m ³ /kg
<u>Sound V</u>	Sound Velocity	m/s
<u>Oxy</u>	Oxygen	mg/l
<u>Fluor.</u>	Fluorescence	v
<u>Pressure:</u>	Pressure	db

Continuous Recording Data:

The continuously recording data were processed with an in-house program which:

1. Cuts cruise track lines from the continuously recorded file.
2. Plots raw data with no corrections.

Rosette Cast Data:

Rough seas (>Beaufort 7) prevented near surface water collections at several stations. In these situations, Niskin bottles were fired no shallower than 15 m. below the surface.

Salinity data were computed using the recommended Joint Panel on Oceanographic Tables and Standards (JPOTS) formula (UNESCO, 1991). The surface salinity contour map was generated with *Surfer* software (version 4, Golden Software, Inc.) from CTD salinity data. Figure 7 of Appendix B is a plot of the salinity values with the CTD versus those obtained from Niskin water samples from the same stations. The difference between the Niskin bottle salinity values and the CTD values is plotted versus depth in Figure 8 (Appendix B).

The mean and standard deviation for the Niskin bottle salinities and CTD salinities are as follows:

Mean bottle salinity: 36.0089

Standard deviation from mean bottle salinities: 1.2998

Mean CTD salinity: 36.1849

Standard deviation from mean CTD salinities: 0.2940

The Department of the Interior Mission

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering sound use of our land and water resources; protecting our fish, wildlife, and biological diversity; preserving the environmental and cultural values of our national parks and historical places; and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to ensure that their development is in the best interests of all our people by encouraging stewardship and citizen participation in their care. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.

The Minerals Management Service Mission

As a bureau of the Department of the Interior, the Minerals Management Service's (MMS) primary responsibilities are to manage the mineral resources located on the Nation's Outer Continental Shelf (OCS), collect revenue from the Federal OCS and onshore Federal and Indian lands, and distribute those revenues.

Moreover, in working to meet its responsibilities, the **Offshore Minerals Management Program** administers the OCS competitive leasing program and oversees the safe and environmentally sound exploration and production of our Nation's offshore natural gas, oil and other mineral resources. The MMS **Minerals Revenue Management** meets its responsibilities by ensuring the efficient, timely and accurate collection and disbursement of revenue from mineral leasing and production due to Indian tribes and allottees, States and the U.S. Treasury.

The MMS strives to fulfill its responsibilities through the general guiding principles of: (1) being responsive to the public's concerns and interests by maintaining a dialogue with all potentially affected parties and (2) carrying out its programs with an emphasis on working to enhance the quality of life for all Americans by lending MMS assistance and expertise to economic development and environmental protection.
